

### What is a 400V to 800V reconfigurable battery pack & HV bus?

Some of these options utilize a 400V to 800V reconfigurable battery pack and high voltage (HV) bus in order to provide the desired performance, efficiency and charging flexibilities while providing a compatible interface between all power converters, inverters, and energy storage systems.

#### Why do EVs need 800V?

800V architecture in EVs can enhance efficiency and reduce weight. By increasing the voltage, the current needed is much lower, enabling thinner cables and smaller electronic components. This reduces the vehicle's weight and minimizes energy losses to heat, thereby increasing overall efficiency and battery range.

#### What is a 800 volt battery?

In the same way as 400-volt architecture,800-volt architecture has a voltage range rather than a fixed battery voltage. Its range is between 600 and 900 volts. Electric vehicles with 800V architecture are available on the market; however,only some manufacturers currently offer them.

### Are 800 volt EV charging stations compatible?

Although compatible with 800V EV charging stations, they will be limited to 400 Vdc output, which could result in slower-than-expected charging speeds depending on the charger's output current. In the same way as 400-volt architecture, 800-volt architecture has a voltage range rather than a fixed battery voltage.

#### Are 400V EVs better than 800V?

The lower production costs pass on savings to consumers, and the purchase price of a 400V EV is less than that of an 800V EV. Electric vehicles that utilize this system architecture have a 400-volt battery pack as the power source for the vehicle's electric motors and are compatible with both 400V and 800V DC fast charging stations.

### Will EVs be able to run beyond 800 volts?

For heavy duty EVs that require high power, we may even see architectures beyond 800 volts. The transition to 800-volt EVs is already well underway. Automakers Porsche, Hyundai, Genesis, Kia and Audi already offer EVs with 800-volt battery systems. Volvo, Polestar and Lotus have also committed to 800-volt architectures.
