Pumped hydroelectric storage is the oldest energy storage technology in use in the United States alone, with a capacity of 20.36 gigawatts (GW), compared to 39 sites with a capacity of 50 MW (MW) to 2100 MW [[75], [76], [77]]. This technology is a standard due to its simplicity, relative cost, and cost comparability with hydroelectricity.

As America moves closer to a clean energy future, energy from intermittent sources like wind and solar must be stored for use when the wind isn't blowing and the sun isn't shining. The Energy Department is working to develop new storage technologies to tackle this challenge -- from supporting research on battery storage at the National Labs, to making investments that take ...
