

"An onsite energy storage system makes sense for many operators as it allows storage of recuperated braking energy and not have it fed back into the electricity grid," says Aleksandar Veliimirovic, Sales Engineer, ABB. "That stored electricity can be used to smooth out supply peaks which delivers lower overall energy used and significant ...

In 2012, ASG introduced an energy management system that is certified in accordance with DIN EN ISO 50001. From 10 million kilowatt hours in 2013, we have now reduced the annual energy consumption to 6.8 million kilowatt hours. The ABB motor drive packages are part of our efforts to further reduce energy consumption.

Energy monitoring and energy management are crucial. This is where ABB's InSite energy management system comes into play. It is scalable for any building where it monitors and controls energy consumption, currents, voltage, temperature, and switching states. ... It is easily managed through smartphones connected to Wi-Fi. The data is stored ...
