

I'm trying to write a file to my phone. I used `Environment.getDataDirectory()` to know the internal storage's path and `Environment.getExternalStorageDirectory()` to know the external storage's path.. But when I use `Environment.getExternalStorageDirectory()` as path, the file is created in internal storage.And when I use `Environment.GetDataStorage()` as the path, the file is not ...

What Does External Storage Mean in Android. External storage is a feature that is available on many Android devices. External storage can be used to store media files, documents, and pictures. An external storage device, such as an SD Card, can also be used to store external storage. External storage can be accessed by the user, but it is still ...

What is External Storage in Android? In Android External Storage is used for storing files that other apps are able to access. External storage is better for storing larger files that need to be shared with other apps. Files in external storage can be app specific, meaning that when the app is uninstalled these files in external storage will be ...

I believe when you are targeting Android 13 or above, you need to obtain access to Media Files Permission instead of READ_EXTERNAL_STORAGE.. When you app runs in Android 13 devices, the READ_EXTERNAL_STORAGE permission mentioned in the Android Manifest will be ignored as mentioned in this article. Instead there are three new permissions ...

Delete unnecessary media. This can include downloads, pictures (like screenshots), videos, and so on. Since these files can take up a fair amount of space, clearing out just a few can improve your phone's memory substantially. If you don't want to delete certain photos or videos, you can back them up to Google Drive instead.; To see how much storage ...

So in effect, if you were to request WRITE_EXTERNAL_STORAGE on Android 11 or later, you would be requesting nothing. This is the whole point of Android's migration to scoped storage, which effectively prevents apps from reading or writing to the storage directories of other apps UNLESS they are accessing specific file types (e.g. media, using ...
