

What is China's energy storage strategy?

Localities have reiterated the central government's goal of developing an integrated format of "new energy +storage" (such as "solar +storage"), with a required energy storage allocation rate of between 10% and 20%. China has created an energy storage ecosystem with players throughout the supply chain.

Should China invest in energy storage technology?

Subsidies of at least 0.169 yuan/kWh to trigger energy storage technology investment. Energy storage technology is one of the critical supporting technologies to achieve carbon neutrality target. However, the investment in energy storage technology in China faces policy and other uncertain factors.

Why is China embracing new-type energy storage?

The new-type energy storage sector is embracing massive opportunities in China as the country has been promoting storage technologies in accordance with a massive wind and solar capacity build-out to allow exports of large-scale clean energy to other regions, Li said.

What are China's energy storage incentive policies?

China's energy storage incentive policies are imperfect, and there are problems such as insufficient local policy implementation and lack of long-term mechanisms. Since the frequency and magnitude of future policy adjustments are not specified, it is impossible for energy storage technology investors to make appropriate investment decisions.

What is the investment benefit coefficient of energy storage technology?

Therefore, this study uses the unit annual peaking capacity of the energy storage system for the solution, that is, the investment benefit coefficient of the first energy storage technology is 140 (14,000 MWh/100 MWh).

What is the expected value of a second energy storage technology?

The expected value of the first energy storage technology, including the embedded option, is  $F_1(P)$ . In State (1,2), the second energy storage technology arrives with a Poisson process, and the firm invests in the second technology at the optimal time. The investment opportunity value of the second energy storage technology is  $F_{1,2}(P)$ .
