

Best ways to store water at home

What is the best way to store water?

A best way to store your water is in BPA-free heavy duty plastic containers that have been manufactured specifically for water storage. These containers are often colored blue, and often labeled as safe for drinking water. You may also use pretty much any food-grade storage container. Just use a common sense approach to how and what you choose.

Can you put water in a storage container?

Never use the water in the storage container itself. Pour the water into another container to wash clothing, take a bath, or do anything else as you will want to keep the storage containers clean and ready to use again if you find access to more water. Use one container at a time.

How do you store recycled water?

Store water only in food-grade containers, i.e. plastics numbered 1, 2, 4 and 7. You can find the number within the triangular recycling symbol imprinted on the outside or the bottom of the container. Other types of plastic can leach into the water and contaminate it. Store your water in a cool, dark room, preferably between 50 and 70 degrees.

How do you store bottled water?

Store your water in a cool, dark room, preferably between 50 and 70 degrees. Leaving the water in the sun to heat up increases the chances of microorganisms growing into colonies. Ultraviolet sunlight also deteriorates the plastic containers. Label the containers clearly to let everyone know they contain drinking water.

How do you store emergency water?

Below are five options for storing emergency water. Many people buy bottled water or use recycled plastic bottles to store water. It is a quick, cheap, and easy way to build an emergency water supply. However, plastic bottles are not a good solution for long-term water storage.
