1. There is no line between material and structure in nature as the essence of any material (e.g., bone, collagen, wood) is the microscopic structure and it is almost impossible to differentiate "structure" and "material" in natural organisms. Considering this fact, innovative bio-inspired building envelopes can also be regarded as bio-inspired material but of course in ...

A metric of energy efficiency of storage is energy storage on energy invested (ESOI), which is the amount of energy that can be stored by a technology, divided by the amount of energy required to build that technology. The higher the ESOI, the better the storage technology is energetically.
