What is thermal energy storage? Thermal energy storage means heating or cooling a medium to use the energy when needed later. In its simplest form, this could mean using a water tank for heat storage, where the water is heated at times when there is a lot of energy, and the energy is then stored in the water for use when energy is less plentiful.

In May 2022, the City of Oslo and Oslo Hafslund Celsio made an agreement to finance carbon capture and storage (CCS). The project is set to receive NOK 3 billion in support from the state, if other organizations will finance the remainder cost of the project. Oslo Municipality and Hafslund Oslo Celsio agreed to share the costs between them.
