The figure to the left shows the yearly average for the aFRR reservation prices. Both revenue streams are stackable. At the supra-national level, PICASSO enables TSOs to activate reserved assets in real time. This activation process follows a pay-as-clear method, meaning the assets are activated in the merit order and the marginal asset makes the price.

By definition, a Battery Energy Storage Systems (BESS) is a type of energy storage solution, a collection of large batteries within a container, that can store and discharge electrical energy upon request.
