Shortly afterwards, however, Egypt's petroleum ministry said the target share for renewables was 40% by 2040, with the country maintaining a major reliance on natural gas.

Does Egypt need natural gas?

The country has in recent years relied heavily on natural gas, which it defended during the United Nations COP27 conference in 2022 as a "transitional fuel" at a time when it was a net exporter of gas. But last year, Egypt faced prolonged power outages as natural gas production was hit by financial constraints and declining local extraction.

One of the promising options to mitigate the variability of renewable energy sources is to use large-scale energy storage systems. A promising novel solution that resolves these issues is the liquid air energy storage (LAES) system, which is a technology with a high energy density that does not require large storage volumes.
