

How does a decentralized cloud storage provider work?

In order to enlist the services of a decentralized cloud storage provider, a user typically enters into peer-to-peer (P2P) smart contracts on blockchain-based decentralized storage marketplaces. On these platforms, smart contracts determine how much data will be stored, how long it will be stored for, and at what price.

Are cloud storage plans worth it?

Cloud Storage Value: A plan's value is subjective to the individual user and includes elements like features, security, privacy and storage space. Are Bigger Plans Worth It: Cloud storage pricing scales with increased storage space, and it usually includes extra features to incentivize a more expensive plan.

Will decentralized cloud storage become more affordable over time?

Decentralized services providers don't have the same overhead so there are fewer costs to scale. This keeps billing simple and very affordable. Believe it or not, we predict decentralized cloud storage is going to get more and more affordable over time. Why?

How much does cloud storage cost?

Looking at the price tag alone, it's dirt cheap. In fact, it blows proper cloud storage options out of the water. You can get 5TB of storage for as low as \$69.66 per year. However, because you really get no typical cloud storage features to speak of, you don't get much value out of it beyond its backup features.

Should you choose the cheapest cloud storage?

In most cases, simply going for the cheapest cloud storage is a poor way of evaluating price comparisons of cloud storage services. Personal cloud storage platforms generally don't offer unlimited storage for price X - that typically falls in the realm of business cloud storage or online backup.

What makes a cloud storage service a good choice?
