However, not as many of us understand the importance of battery storage, aka battery energy storage systems (BESS). Without battery storage, a lot of energy generated by renewables can go to waste. Between October 2022 and January 2023, the UK wasted enough wind energy to power 1.2 million homes.

From 1 February 2024, you won't pay any VAT on batteries for solar panels (previously you had to pay 20% VAT, unless you bought it as part of a solar panel system). So now you can install a standalone energy storage battery or add one to your existing solar PV system, and you'll pay 0% VAT. From 1 April 2027, this is set to increase to 20% VAT.

So, what are the opportunities to make money from batteries right now? Battery storage revenue streams The key revenue streams available to batteries today, focus on two core applications: ...

The importance of energy storage systems becomes increasingly evident. By addressing their intermittent nature, energy storage plays a pivotal role in efficiently utilizing renewable energy, such as solar and wind power. By storing excess energy generated during periods of high production, energy storage systems ensure a consistent and reliable power ...

While some 1.4million UK households have solar panels, around 4.9 per cent of the population, just 43 per cent of those with solar panels, or 602,000 also have a home battery.

While the upfront cost of a solar battery system can be high, the energy savings could make it a worthwhile investment. To illustrate whether a solar home battery system makes financial sense, we'll look at a customer profile that best reflects: 1. The average energy user; and. 2. A common system configuration.

How can a solar battery save you money? A solar battery can save you money by allowing you to use more of the electricity your solar panels produce. The average household will use 80% of its solar electricity with a battery if it runs it in a typical way, up from 50% without one. You can save hundreds of pounds per year in this way.

What storage incentives are available to you? The first thing to know is whether there are any storage incentives available to you. As is the case with solar, the best incentive for energy storage is the federal
