Capacitors vs Batteries. So the big question here is which is better, a capacitor (or supercapacitor) or a standard lead-acid battery? The capacitor weights significantly less and has an incredible service life and power output, but sucks as specific energy (amount of energy stored), and has a very quick discharge rate.

Energy Density vs. Power Density in Energy Storage . Supercapacitors are best in situations that benefit from short bursts of energy and rapid charge/discharge cycles. While batteries and capacitors are both energy storage devices, they differ in some key aspects. A capacitor utilizes an electric field to store its potential energy, while a battery stores its energy in chemical form. Battery technology offers higher energy densities, allowing them to store more energy per unit weight than capacitors.
