

Can Doping carbon nanostructures improve energy storage devices?

A large amount of power can be generated while using these doped carbon nanostructures than the traditional electrodes. This study clearly indicates that the doping carbon nanostructures will concurrently improve oxygen reduction reaction and electrochemical performance of energy storage devices.

Can multiple heteroatom-doped carbon be used for energy storage?

Ever-developing energy storage technologies demand the pursuit of advanced materials with multiple functionalities. Recent studies revealed that multiple heteroatom-doped carbon has been widely used for bi-functional or even tri-functional energy storage and conversion.

Can n-doped carbon dots be used for energy storage?

With its early development stages, N-doped carbon dots require more investigation for other applications, including energy storage. In other studies, the co-doping of nitrogen with other heteroatoms and transition metals were investigated.

Can dopants be used in carbon materials?

Extensive research has been carried out on the applications of carbon materials in its various morphologies and properties. The addition of dopants in carbon materials, whether in situ or post-treatment, has gained significant interest and has driven researchers to explore its benefits and address existing issues.

Does multi-heteroatom co-doping improve energy storage performance?

However, multi-heteroatom co-doping did not achieve significant improvements compared to N-doped carbon materials. In contrast, co-doping of nitrogen and transition metals have shown greater enhancements in performance as electrode materials in energy storage systems, such as LIBs and ZIBs.

Can carbon materials be used as electrodes for energy storage devices?

The application of carbon materials as electrodes for energy storage devices, such as supercapacitors and rechargeable batteries, is an important field of research with ever-growing demands for capacity, rate and long-term performance. Capacitors, in principle, consists of two conductors with an insulator sandwiched in between.

With the rapid development of electric devices, there is a high demand for energy storage systems with higher energy and power densities as well as extended life spans. 1-6 Lithium-ion batteries and lithium-ion capacitors (LICs) are two kinds of energy storage systems that are commonly used in our daily life. 7-14 However, the practicability ...

The permeability and electrochemical efficiency of carbon materials have been thought to be greatly improved by heteroatom doping techniques [30, 31]. Although N-doping improves the conductivity and electrochemical

activities of the carbon matrix as well as its permeability, nitrogen-doped carbon is widely used to discuss energy-related issues [32,33,34].

Notably, for heteroatom-doped carbon in ORR, key descriptors include free energy, electronegativity (F), the position of the highest peak on the density of states at the active site ( $E_p$ ), and the p electronic structure  $D_{pz}$  (EF); for ORR and OER in multi-element-doped carbon catalysts, p z-orbitals are used; [142, 143] and atomic radius ...

The doping methods of carbon nanostructures and the applications of doped carbon nanostructures in energy storage applications such as supercapacitors, fuel cells, and LIBs has been briefly discussed. Carbon nanostructures are doped with nitrogen or boron through different to change its surface property, performance and also the wettability of ...

They also synthesized N-doped porous carbon/gC 3 N 4 from bio- waste seeds to use as a negative electrode for ASC device. ... A., Ramadan, W. (2023). Carbon and Metal Doped Polyaniline (PANI) for Energy Storage. In: Uddin, I., Ahmad, I. (eds) Synthesis and Applications of Nanomaterials and Nanocomposites. Composites Science and Technology ...

Porous carbons are widely used in the field of electrochemical energy storage due to their light weight, large specific surface area, high electronic conductivity and structural stability. ... 2018, 509: 529-545. [127] Han L N, Wei X, Zhu Q C, et al. Nitrogen-doped carbon nets with micro/mesoporous structures as electrodes for high-performance ...

Hard carbon (HC) is a prospective energy storage anode material in sodium-ion batteries (SIBs). However, their unimpressive rate capability and poor initial Coulombic efficiency (ICE) have driven the requirements for superior capability HC anode materials. ... Surface-dominated storage of heteroatoms-doping hard carbon for sodium-ion batteries ...

The largest cohesive energy in the case of N-doped carbon is assured by the larger values of the descriptors corresponding to the reactivity. ... In the following are some remarkable works that has employed B and N co-doped carbon for sodium storage. B, N co-doped carbon has been synthesized through a one-pot synthesis approach and were tested ...

1. Introduction. Due to the efficient, clean combustion and renewable properties, hydrogen energy is expected to be the ideal candidate to replace fossil fuels [1, 2, 3].The latest hydrogen storage goal set by the U.S. Department of Energy (DOE) is 5.5 wt% before 2025 at the near ambient thermodynamic environment (233-333 K) and stable controlled pressures ...

Porous carbon materials with high specific surface area are potential hydrogen storage materials. However, due to the weak van der Waals forces between the material and H<sub>2</sub>, hydrogen can generally be stored only at a cryogenic temperature under high hydrogen pressure.To solve this problem, in this work, ZIF-8-derived

porous carbon material (PCM) ...

Rechargeable metal ion batteries (MIBs) are one of the most reliable portable energy storage devices today because of their high power density, exceptional energy capacity, high cycling stability, and low self-discharge [1, 2]. Lithium-ion batteries (LIBs) remain the most developed and commercially viable alternative among all rechargeable batteries, and graphite ...

The carbon quantum dots can also be isolated from the bulk petroleum coke via a green electrolytic process. N-doped carbon quantum dots with uniform size distribution can be effectively synthesized (Fig. 6). ... for high loading Li-S batteries[J]. *Energy Storage Materials*, 2020, 24:644-654. [49] Hu H, Wu M B. Heavy oil-derived carbon for energy ...

Obviously, it remains a significant gap on the synthesis of biomass derived N-doped porous carbon for energy storage. The doping mechanisms of various N-dopants need to be further elucidated. Also, given the fast-growing interest in N-doped porous that is stimulating high number of research works in the field, an updated on the topic is a must.

Proper modulation of the compositions and porosities of carbon materials is crucial for capacitive energy storage and gas adsorption of carbon materials. Herein, porous N-doped carbon was synthesized from formamide by using a sequential hydrothermal treatment followed by pyrolysis with KOH. The activation with KOH resulted in a high increase in the porosity of the carbon ...

In this chapter, N and S co-doped mesh porous carbon materials (NSC) were prepared using freeze-drying assisted high-temperature carbonization, where sodium polyacrylate was used as the carbon source and sodium thiosulfate ( $\text{Na}_2\text{S}_2\text{O}_3$ ) and sodium nitrate ( $\text{NaNO}_3$ ) is the sulfur and nitrogen sources, respectively s unique layered porosity and the ability to ...

Biomass-derived nitrogen-doped porous carbon was prepared using jujube shell as the precursor through a two-step process involving activation and nitrogen-doping. Different nitrogen sources, organic-N and inorganic-N, were employed to modulate the nitrogen-doping forms, aiming to analyze the influence of various nitrogen-doping forms on the electrochemical ...

To investigate gold-doped carbon nanotubes for hydrogen storage applications, density functional theory has been used as a proven method for exploring the properties of the materials in the ground state. ... A. Muhulet, F. Miculescu, S. I. Voicu, F. Sch&#252;tt, V. K. Thakur, and Y. K. Mishra, "Fundamentals and scopes of doped carbon nanotubes ...

The recent advances of B, N co-doped carbon (BNC) materials, with a focus on the synthetic methods and applications in zinc-based energy storage devices are overviewed, hoping to promote the development and pave new way for the practical application of BNC materials in this field in the future.

Deep-eutectic-solvent synthesis of N/O self-doped hollow carbon nanorods for efficient energy storage. *Chem. Commun.*, 55 (2019), pp. 11219-11222. CrossRef View in Scopus Google Scholar ... Facile synthesis of MnO<sub>2</sub> grown on nitrogen-doped carbon nanotubes for asymmetric supercapacitors with enhanced electrochemical performance. *J. Power Sources* ...

The products present higher reversible capacity and better rate performances than those of carbon nanosheets, which demonstrates the effectiveness of heteroatoms doping. Meanwhile, the synergistic effect of N, S co-doping on boosting Na storage capacity is affirmed through comparing with the N doping carbon nanosheets.

Moreover, different types of nitrogen doping exhibited distinct roles in carbon materials. It was widely accepted that pyrrolic nitrogen and pyridinic nitrogen are electrochemically active sites in carbon materials, while graphitic nitrogen doped into the carbon lattice has no effect on K<sup>+</sup> adsorption. Therefore, it is necessary to explore facile and economical strategies for ...

As a type of energy storage system, supercapacitors (SCs) are considered to be one of the most promising because of their excellent power density, ... Quaternary heteroatom-doped carbon materials (B/P/N/O) have better electrochemical performance (332 F g<sup>-1</sup> at 1 A g<sup>-1</sup> in 6 M KOH) than ternary (B/N/O) and binary ...

Porous carbon spheres (CSs) have distinct advantages in energy storage and conversion applications. We report the preparation of highly monodisperse N-doped microporous CSs through the ...

3 &#0183; This review explores the recent advancements in biomass-derived materials for energy storage system (ESS), including supercapacitors and electrocatalytic reactions. ... Boron-doped carbon can also enhance charge transfer, thermal stability and even alter the degree of disorder in the carbon skeleton (Lyu et al. 2019), induce pseudocapacitance ...

The adsorption-doping route is proposed to fabricate heteroatom-doped carbons. o Gelatin is employed as adsorbate serving as nitrogen source. o Carbon-based electrode exhibits specific capacitance up to 362 F g<sup>-1</sup> at 1 A g<sup>-1</sup>. Symmetric supercapacitor delivers an energy density of 9.13 W h kg<sup>-1</sup>.

However, the energy storage performance of carbon-doped nanofibers composites has not be thoroughly studied yet. In this work, large-aspect-ratio TiO<sub>2</sub>/C NFs were successfully prepared in situ by facile electrospinning process. The doped carbon content can be preciously tailored from 0 to 13.6 wt% by controlling calcinated temperature and ...

The multistage porous structure in NBKCC can promote energy storage and dye molecule storage, while functional group characteristic adsorption and gained pseudocapacitance can be realized by doping B & N. NBKCC has unique structural characteristics of carbon microspheres, which has a relatively wide range of applications in ...

Various studies have confirmed the excellent properties of N-doped porous carbon in electrochemical energy storage devices. Commonly, nitrogen is presented in different types of carbon materials, and the elaboration of the role of different nitrogen species presented in porous carbon in the energy storage mechanism would be more meaningful.

Furthermore, the utilization of biomass-derived carbon in energy storage devices is intricately linked to its electrochemical performance, necessitating careful consideration. ... The S-doped derived carbon synthesized using S powder as the source, exhibits a higher proportion of graphitic domain structure. Additionally, the carbon layer ...

Porous carbons have several advantageous properties with respect to their use in energy applications that require constrained space such as in electrode materials for supercapacitors and as solid state hydrogen stores. The attractive properties of porous carbons include, ready abundance, chemical and thermal

Sodium-ion batteries (SIBs) are one of the most advanced post-lithium energy storage technologies. The rapid development of SIBs in recent years has been mainly driven by the low cost and abundance of raw materials in comparison to traditional lithium-ion batteries: Na vs. Li, Fe/Mn vs. of Ni/Co in cathodes and synthetic hard carbons (HCs) vs. mined graphite in ...

The doped carbon material not only exhibits good cycling performance but also the highest specific energy of 29 Wh kg<sup>-1</sup> corresponding to a specific power of 646 W kg<sup>-1</sup>. The improved capacitive performance of phosphorous-doped porous carbon material proposes its use in energy storage applications. In the present investigation, we report the ...

The application of carbon materials as electrodes for energy storage devices, such as supercapacitors and rechargeable batteries, is an important field of research with ever-growing demands for capacity, rate and long-term performance. ... As a cathode in Li-ion capacitor system, the doped carbon material exhibited high energy and power ...

In this study, niobium oxide nanoparticles (NbO<sub>2</sub>) were synthesized using the hydrothermal technique and then composite with areca activated carbon (ACs) to produce activated carbon-niobium oxide (ACs-NbO<sub>2</sub>) nanocomposite for use in energy storage devices. The surface morphology and properties were characterized using various techniques, such as ...
