

Citizen 9015 movement energy storage

Is citizen 9015 a good watch?

It is made in Japan and was first introduced in 2009. This movement is found in many new microbrand watches because it is easily obtainable, has a desirable hacking function, and considered a workhorse movement. Citizen (Miyota) claims the accuracy of the caliber 9015 to be within -10~+30 seconds per day.

What are the technical characteristics of Citizen Miyota 9015 automatic movement?

Here are the technical characteristics of the 9015 automatic movement from the Citizen Miyota manufacture: Display: Date, hour, minute, second. The Charlie Paris team agrees to praise the merits of this mechanism. Watch enthusiasts agree to describe this movement as a real "tractor", for its robustness and reliability.

What is the frequency of Miyota 9015 movement?

The Miyota 9015 movement has a frequency of 28,000 vibrations per hour and functions precisely. It specifies the deviation to be in the range of -10 to +30 seconds per day. with a power reserve of 42 hours, a watch with this automatic movement can be placed aside for two days without stopping.

How does the Miyota 9015 movement work?

The Miyota 9015 movement is powered up by either an oscillating movement of its weighted rotor through natural counter clockwise movements, or manually winding it by the crown. The 9015 can be manually wound or automatically powered by the oscillating movement of its rotor. The hacking function allows the second hand to completely stop while setting the time.

Is Miyota 9015 a good movement?

Garbage Seiko movements in low end watches and Miyota's own 8215 series brought that on. Some of us are used to quality Swiss movements in our mechanical watches and fear blowing even a few hundred on something "less". SO FAR, the Miyota 9015 is the only movement which has proved me wrong. MANY DO. Including me until I bought one.

Is the 9015 a good watch?

But as many others have stated, the 9015 is an accurate movement. My Sellita is a tad noisy while winding it up with the crown compared to my Miyota that is as quiet as a mouse when winding with the crown. I can't compare it to an ETA yet as my first ETA based watch will arrive in December. It's not so much the movement, it's the regulation.

An offshoot of Citizen watches, the Miyota movement manufacturing factory was founded in 1959 and began operational movement sales in 1980. Since then, it's been responsible for creating a massive chunk of the world's automatic movements thanks to its 2000, 8000, and 9000 calibre series. ... Winding the crown 15-20 times will get the seconds hand to start moving. To fully wind the movement, turn the crown ~40 times. You will get better accuracy results from a full wind. Replacement Prices: Replacement prices for raw Citizen 9054 movement are unavailable because it is only being used in Citizen's own watches.

Citizens' energy storage units will serve to reduce peak energy demand to decrease electricity costs. The projects will aid critical community facilities like schools, hospitals and emergency response centers in becoming self-sufficient in times of crisis. Our projects. Philadelphia, PA

It's also a nice thin movement, which means we can keep things slim in the case without losing strength. Important features of the Miyota 9015 automatic / manual winding. The 9015 is powered up by either an oscillating movement of it's weighted rotor through natural counter clockwise movements. Or manually winding it by the crown.

I think the main difference between the 9015 and 9051 is that the 9051 has some level of magnetic resistance protection built into it. I own several Citizen watches with 9015, 9051 and the 8204 movement. All three movements have been more accurate than their stated specs.
