If we don't use it, it goes to waste. That's because we can't store electrical energy. How can we avoid wasting it? Well, we can convert it into other forms of energy that can be stored. For example, batteries can convert electrical energy into chemical potential energy. Other systems can convert electrical energy other types of energy.

Low Humidity is usually the culprit of static from cloth. If you don't have the money to invest in a humidifier, and you don't mind the cloth getting damp, spritz it lightly with a spray bottle of water. You don't need to soak it, just a light mist should make a drastic difference.

With clothing that can generate electricity, he notes, that's no longer an issue: "You can make power by yourself." Sang-Woo Kim led the development of this new material.
