

How much energy does a dehumidifier use?

The highest IEF Energy Star rated dehumidifiers - the #1 hOmeLabs Dehumidifiers (20,35,50-pint models) - have a 1.90 L/kWh integrated energy factor. As we know, 1.7 L/kWh IEF models are about 15% more efficient than standard models. With a bit of calculation, we can estimate that a standard dehumidifier has an IEF of about 1.45 L/kWh.

What to look for in an energy-efficient dehumidifier?

Things to look for in an energy-efficient dehumidifier include room size, capacity, and integrated energy factor. These Energy Star-certified portable dehumidifiers will get your home from damp to dry in no time. This 50-pint energy-saving dehumidifier is not only energy efficient but also extremely versatile, making it our top pick.

What is a portable room dehumidifier?

Portable room dehumidifiers are typically used to dehumidify a single room or space and can be easily moved where they are needed. Whole-home dehumidifiers are typically installed to use your home's air ducts to dehumidify one or more rooms and are often permanent. ENERGY STAR products are certified to save energy.

Does a Energy Star dehumidifier save energy?

A dehumidifier that has earned the ENERGY STAR label uses more efficient refrigeration coils, compressors, and fans to remove the same amount of moisture as a similarly sized conventional unit but uses 13% less energy. In fact, the annual energy saved by one of these models could power your ENERGY STAR certified refrigerator for nearly two months.

Does a dehumidifier cool a room?

Dehumidifiers remove moisture from the air and can make a room feel less humid. However, they don't cool the temperature of the air-- although the effect of the reduction in the moisture level can make it feel as though it's cooler. In fact, a dehumidifier will produce heat while it's working, which may slightly increase the room temperature.

What makes a good dehumidifier?

Energy Star Certification -- It's always useful to look out for Energy Star Certification as this guarantees savings in terms of energy and money. Humidity sensor -- With a humidity sensor, your dehumidifier will detect relevant changes in the atmosphere and can automatically switch on and, in some cases, set its power accordingly.

The efficiency of various dehumidifiers is quite different. Since the dehumidifier is the main equipment of the energy storage liquid desiccant cooling system, the efficiency of the system is ...
