

What is the difference between storage modulus and dynamic loss modulus?

The storage modulus is often times associated with "stiffness" of a material and is related to the Young's modulus, E. The dynamic loss modulus is often associated with "internal friction" and is sensitive to different kinds of molecular motions, relaxation processes, transitions, morphology and other structural heterogeneities.

Why is dynamic loss modulus important?

The dynamic loss modulus is often associated with "internal friction" and is sensitive to different kinds of molecular motions, relaxation processes, transitions, morphology and other structural heterogeneities. Thus, the dynamic properties provide information at the molecular level to understanding the polymer mechanical behavior.

What are the characteristics of a material in the DMA?

Often seen in the DMA as step changes in E' at low temperature. Toughness The ability of a material to absorb mechanical energy without fracturing or deforming. Ultimate strength The greatest stress a material can withstand without failing, breaking apart.

What is the'sum' of loss and storage modulus?

The 'sum' of loss and storage modulus is the so-called complex modulus G*. The complex viscosity h*is a most usual parameter and can be calculated directly from the complex modulus. This viscosity can be related to the viscosity measured in a steady shear test by a relation known as the Cox-Merz rule.

How do DMA instruments affect viscoelastic properties?

DMA instruments apply sinusoidally oscillating stress to samples and causes sinusoidal deformation. The relationship between the oscillating stress and strain becomes important in determining viscoelastic properties of the material.

How can dynamic mechanical loss moduli be fit in the frequency domain?

The dynamic mechanical loss moduli determined experimentally in the current study will be fit in the frequency domain using the H-N formalism. A program that has been written by Park17 will be utilized for this purpose, and is listed in Appendix F of this text.
