

How can we protect donkeys from Skin Trade?

Ongoing efforts to raise the profile of animal welfare holistically should form a core pillar of any strategy to protect donkeys and livelihoods from the trade. On the African continent, where the skin trade impact is significant, the policy environment on bans vary.

Are donkey skins a health hazard?

The use of animal derivatives in traditional Chinese medicine (TCM) dates back more than 5000 years. Donkey skins are one such animal derivative, the skins are used to produce ejiao, which is a luxury product and believed by some to have a variety of health benefits. The increasing demand for ejiao is putting the global donkey population at risk.

Is the Donkey Skin Trade ethical?

As with all domesticated species bred for human consumption/use there are always animal welfare and ethical concerns; however it seems that the slaughter rate, lack of regulation and treatment that donkeys receive at each stage of the skin trade is particularly alarming. The donkey skin trade is driven largely by Chinese consumers.

Do donkeys suffer from Skin Trade?

The Donkey Sanctuary (2019) report that donkeys suffer at every stage of the skin trade from sourcing to slaughter. Investigations have reported that sick, injured and pregnant donkeys are being transported to slaughter; this is against the World Organisation for Animal Health (OIE) guidelines (Donkey Sanctuary, 2019).

Are donkey skins causing the decline of donkeys in China?

The growing demand for donkey skins has also likely contributed to the decline of donkeys in China (Bennett & Pfuderer, 2020) and is now putting the global population at risk (Donkey Sanctuary, 2017; McLean & Gonzalez, 2018; Skippen et al. 2021).

Why are ejiao & donkey skins so expensive?

Through a combination of increased demand and a shortage of donkeys, the price of ejiao, donkey skins and donkeys have increased significantly (Bennett & Pfuderer, 2020, Donkey Sanctuary, 2019).

Sixteen-year-old Andalusian jenny with pituitary pars intermedia dysfunction. Note the pot belly appearance and dorsal muscle sarcopenia. PPID diagnosis in donkeys is commonly empirically extrapolated from protocols oriented to horses, using primarily a basal ACTH determination and performing a dynamic test in doubtful cases. Well-designed studies about cutoff values for ...

FOR ALMOST TWO millennia, donkey hide glue (colla corii asini) has been part of the Chinese apothecary.

Ejiao, or "E-glue" as this medicine is referred to in Chinese, consists of gelatin that is extracted from donkey hides by boiling them in water. According to traditional Chinese medicine, ejiao strengthens blood, stops bleeding, and improves the quality ...

However, all the methods for the generation and collection of energy require distinctive materials [[27], [28], [29]], peculiar processes [28] with specifically-designed device structures [29], and specific energy sources such as body motion energy [30], body heat [31, 32] or solar energy [22, 33], with some degree of successes. The collected energy is usually ...

At least 5.9 million donkeys are slaughtered for their skins every year. The collagen from their skin produces ejiao, a traditional Chinese medicine. China's domestic donkey population has collapsed, so, the ejiao industry has shifted to a global trade network to source its donkey skin to continue meeting demand. With such intense demand, skin traders look for a supply at any cost.

select article Corrigendum to "Multifunctional Ni-doped CoSe₂ nanoparticles decorated bilayer carbon structures for polysulfide conversion and dendrite-free lithium toward high-performance Li-S full cell" [Energy Storage Materials Volume 62 (2023) 102925]

Micro- and nanoscale polymer composites have gained a lot of interest in the electronics industry particularly in energy storage and energy generation during the past few decades (S. Kumar, Yadav, Prakash, et al. 2022b). Polymer nanotechnology has seen rapid growth in the electronics industry as a result of its low production cost, light weight, high ...

Energy storage materials are functional materials that utilize physical or chemical changes in substances to store energy [18-20]. From: Journal of Alloys and Compounds, 2023. ... This paper reviews the recent progress of flexible skin-patchable and implantable energy storage devices, covering key considerations on the electrode materials in ...

dear lord, did i love this movie. there's something inherently sinister about these vintage fairy tales, which are so boastfully naked in their storytelling that a raw sexuality emanates from the furniture. maybe i've just watched too much Borowczyk, but in sublimating all thoughts of sex into a storybook-pure concept of "love," all eros assumes a darker desire. i know Demy loves this ...

Hydrogen energy has been widely used in large-scale industrial production due to its clean, efficient and easy scale characteristics. In 2005, the Government of Iceland proposed a fully self-sufficient hydrogen energy transition in 2050 [3] 2006, China included hydrogen energy technology in the "China medium and long-term science and technology development ...

Energy Storage Materials is an international multidisciplinary forum for communicating scientific and technological advances in the field of materials for any kind of energy storage. The journal reports significant new findings related to the formation, fabrication, textures, structures, properties, performances, and

technological applications ...

Good practices in farm animal care are crucial for upholding animal well-being, efficiency, and health. Pigs, like other farm animals, are exposed to various stressors, including environmental, nutritional, chemical, psychological, physiological, and metabolic stressors, which can disrupt their internal balance and compromise their well-being. Oxidative stress can ...

Donkey Skin (French: Peau d'âne; also known in English as Once Upon a Time and The Magic Donkey) is a 1970 French musical fantasy comedy film directed by Jacques Demy, based on Donkeyskin, a 1695 fairy tale by Charles Perrault about a king who wishes to marry his own daughter. It stars Catherine Deneuve and Jean Marais, with music by Michel Legrand. Donkey ...

Countless materials with novel properties have come from these areas such as interface superconductivity material, single-atom catalyst, two-dimensional material, heterostructure material, and our subject, energy storage material. 5 Therefore, structure characterization has been the main focus in energy storage material research, where ...

6 REPORT 2 THE GLOBAL TRADE IN DONKEY SKINS A TICKING TIME BOMB 7 Mass slaughter at donkey market, Nigeria. Pile of fresh skins on slaughterhouse floor, Kenya. EXECUTIVE SUMMARY Until now, the global donkey skin trade has largely been unrecognised as a biosecurity hazard. At a local and regional level, where the trade

To meet the requirements for both energy storage performance and skin-attached biomedical functionality, various materials, including carbon nanomaterials, metals, and polymers, have been investigated. This section discusses the compatibility of these active materials in up-to-date energy storage devices for biomedical applications.

Meanwhile, the tenderness and flavor of donkey meat depend on the muscle type, storage and processing conditions. Genetics, on the other hand, fundamentally affect donkey meat quality by ...

1 ; The integration of electronics with the human body or wearables necessitates the evolution of energy storage devices capable of seamless adaptation to the conformability of the skin and textiles. This work focuses on developing an intrinsically stretchable electrode ...

Using super-high pressures similar to those found deep in the Earth or on a giant planet, researchers have created a compact, never-before-seen material capable of storing vast amounts of energy.

preferred form of feed supplying nutrients and energy (19). Dairy products have been regarded as a conventional nutrient for the skin and milk bath remains popular. Dairy protein allergy ...

Trade in donkey skin for the production of E-Jiao, a Traditional Chinese Medicine, has been linked to the

international wildlife trade, including the timber trade. We ...

Carbon is the most commonly utilized component material, and it has garnered significant interest because of its high electronic conductivity, large specific surface area, controllable pore size, excellent chemical stability, and good mechanical strength [5, 6]. Based on structural differences, carbon-based materials can be categorized into two groups [7]: graphite ...

DOI: 10.1016/j.est.2024.111610 Corpus ID: 269106235; Experimental study and application on a novel skin energy harvesting and storage system @article{Liu2024ExperimentalSA, title={Experimental study and application on a novel skin energy harvesting and storage system}, author={Fuhai Liu and Shiyuan Chang and Lianbin Xia and Hao Zhou and Chi Zhang and Yijie ...

1 INTRODUCTION. Rechargeable batteries have popularized in smart electrical energy storage in view of energy density, power density, cyclability, and technical maturity. 1-5 A great success has been witnessed in the application of lithium-ion (Li-ion) batteries in electrified transportation and portable electronics, and non-lithium battery chemistries emerge as alternatives in special ...

Ejiao, a gelatin product obtained from boiling donkey skin, is popular in traditional Chinese medicine. Originally marketed as an expensive delicacy with widespread healing properties, it ...

The increase of knowledge on the composition of donkey milk has revealed marked similarities to human milk, which led to a growing number of investigations focused on testing the potential effects of donkey milk in vitro and in vivo. This paper examines the scientific evidence regarding the beneficial effects of donkey milk on human health. Most clinical studies ...

A devastating demand for donkey hides is decimating the donkey population in Africa, and threatening the livelihoods of millions of the world's poorest and most marginalized people. Kisima is a widow living in Nimalat, Kenya, and raises her nine children alone. She earns money through selling charcoal at the market and, to do so, she is completely dependent on ...

Animal proteins are essential for the optimal growth and health of humans. Meat and milk are common sources of protein, mostly produced by ruminants. The agrarian challenges experienced around the world warrant sourcing alternative proteins from animals that can withstand harsh environmental conditions to produce quality proteins. Donkeys (*Equus asinus*) ...

Donkey milk moisturizes skin due to its high vitamin, mineral, and polyunsaturated fatty acid content. The chemical makeup and potential therapeutic benefits of donkey milk warrant additional ...
