Description. The 7202c is a dual-port, asynchronous serial interface PCI card that provides two RS-232 serial ports capable of data rates to 1.0 Mbps. Each RS-232 port implements all modem control signals for maximum compatibility with a wide range of peripherals. The 7202c utilizes two, independent, enhanced 16550 compatible UARTs that provide 256-byte Tx/Rx FIFOs.

Gearmo's 8 port Industrial RS232 DB9 adapter, connects to your Laptop or desktop through a single USB port while providing you with 8 fully addressable DB9 RS232 Com ports, these ports can be easily configured in your systems device manager.

Description. Easily communicate with up to 16 serial devices over an Ethernet network with the 4161 Ethernet serial server. Each RS-232 port implements all common modem control signals for maximum compatibility with a wide range of peripherals. SeaLINK®; products use industry-standard RFC 2217 TCP/IP protocol for maximizing compatibility with the widest range of ...

You can also use No Parity. For Even and Odd parity, the serial port sets the parity bit (the last bit after the data bit) to a value to ensure that the data packet has an Even or Odd number of logic-high bits. For example, for Even parity, if the data is 10010010, the serial port sets the parity bit as 1 to keep the number of logic-high bits Even.

8 serial RS-232 or RS-232/422/485 software-selectable ports to connect a wide variety of serial equipment over IP networks Dual 10/100/1000 Ethernet with dual SFP+ support (select models), Digi CORE®; LTE module support, micro SD for data logging, two USB ports and optional Wi-Fi, digital/analog IO and four additional Ethernet switch ports

Serial Ports: 4 (or 2) per-port software selectable RS422 & RS485, and/or RS232 depending on model
UART: Quad 16C950 with 128-byte FIFO for each transmit & receive buffer
Baud Rates: up to 921.6k baud in RS-232 up to 3MBaud in differential modes advanced-prescaler allows a wide variety of unusual baud rates

The RS232 serial port is present on most Windows PCs. RS232 allows only one master and one slave to communicate on each line. RS232 operates in a full duplex mode, and its communication speed reaches up to 115Kbilts/s. In RS-232, the distance between the two devices does not generally exceed 15 meters (50 ft).

The maximum speed is limited by the specs of the UART hardware. I believe the "classical" PC UART (the 16550) in modern implementations can handle at least 1.5 Mbps. If you use a USB-based serial adapter, there"s no 16550 involved and the limit is instead set by the specific chip(s) used in the adapter, of course.

RS-232 DB9 This RS232C DE-9 (usually miscalled DB-9) port is available in some PCs and many other devices. An RS-232 serial port was once a standard feature of a personal computer, used for connections to modems, printers, mice, data storage, uninterruptible power supplies, and other peripheral devices.
