In this paper, a simple explanation of the energy of simple batteries or galvanic cells is given in terms of two conceptually meaningful contributions: cohesive ("lattice") energies and ionization ...

Batteries are valued as devices that store chemical energy and convert it into electrical energy. Unfortunately, the standard description of electrochemistry does not explain specifically where or how the energy is stored in a battery; explanations just in terms of electron transfer are easily shown to be at odds with experimental observations. Importantly, the Gibbs energy reduction ...
