What battery does a spot welder use?

You can use this spot welder to weld 18650,21700 batteries,32650 batteries,and much more. It relies on a 12V car battery(or equally as powerful AC to DC power supply) For the best results and most practical and economic setup,a 60Ah 600 CCA car battery is recommended for welder operation.

Can You Weld a battery pack with a spot welder?

PowerStream now sells an inexpensive spot welder suitable for welding battery packs. The most common way to hold the pack together is to use heat-shrink tubing. This has sufficient strength for small packs,but as the weight increases more structural strength is necessary.

Why should we use constant energy in a weld spot?

Constant energy delivered to the weld spot should result in more consistent welds. The circuit should also be able to detect a failed weld,in this case the requested energy cannot be delivered in a reasonable time. What do you think about this approach? Resistance is futile - We Are The Watt. Assembled module...

This circuit with 12V battery will become a storage spot welding machine for lithium battery, nickel-chromium battery and other nickel sheet welding, according to different configurations can be welded thickness of 0.1MM-0.15mm or so, we have customers A 0.2 mm thickness can be welded by replacing a thicker wire (10 square feet).
