\*Prices reflect the federal tax credit but don't include solar panels, which you'll need to keep your battery charged during an outage. The difference between whole-home and partial-home battery backup systems is pretty self-explanatory: Whole-home battery backup systems can power your entire home in the event of an outage, whereas partial-home setups ...

**Lead Acid Batteries.** Lead acid batteries were once the go-to choice for solar storage (and still are for many other applications) simply because the technology has been around since before the American Civil War. However, this battery type falls short of lithium-ion and LFP in almost every way, and few (if any) residential solar batteries are made with this chemistry.

Driven by global concerns about the climate and the environment, the world is opting for renewable energy sources (RESs), such as wind and solar. However, RESs suffer from the discredit of intermittency, for which energy storage systems (ESSs) are gaining popularity worldwide. Surplus energy obtained from RESs can be stored in several ways, and later ...
