

How do you install hinges on a dovetail box or chest?

In this article, and the above video, I show my simple 4 step method to install hinges onto a dovetail box or chest using woodworking hand tools. Want to skip to a specific section? Click a link below: 1. Mark the Hinge Mortises 2. Cut the Hinge Mortises 3. Install the Hinges on the Chest 4. Install the Hinges on the Lid

Do you need a mortise to install a box hinge?

There are no mortises to cut or holes to drill other than the pilot holes for the screws. While they are one of the easier hinges to install, it's still important to make sure the hinge barrels are in line and that you leave some space between the top and body at the hinge to let the box close fully.

How do you install a hinge box?

Line up the barrels. It's important to keep the hinge barrels aligned so the box works smoothly. Clamping a straightedge in place makes alignment easier. Surface-mount hinges come in several forms and are generally available at hardware stores and big home-improvement stores. Depending on the type, they can be nailed or screwed in place.

How do you install hinges on a hinge mortise?

1. Mark the Hinge Mortises 2. Cut the Hinge Mortises 3. Install the Hinges on the Chest 4. Install the Hinges on the Lid Leave a Comment or Ask a Question?

How do you install hinges on a chest?

1. Mark the Hinge Mortises Now that I've got the hardware looking like antique hardware, we'll start to install hinges on the box. I'll use a pencil to mark the distance in from the edge of the chest where I want the hinge to go. In this case it's about 3-inches from the edge. But do what looks good on your piece of furniture.

What are surface mount hinges?

Surface-mount hinges are visible when the box is closed or open. So if you want to accentuate the hinge and draw attention to the back of the box, surface-mount hinges are a great choice. If you prefer a more subtle or hidden hinge, move along. These hinges are available in a range of sizes capable of accommodating most boxes and lid weights.

This kind of door hinge installation position is also the most installation method nowadays, and the force point is relatively uniform. Large room door hinge installation location. The installation position of the door hinge can be regarded as the hinge installation of the entrance and exit of the home.

The spacing between the hinge holes is about 1-3/8, so some custom work with 80/20 brackets would be needed. The offsets between the two hinges works well with the 1-1/2" increments of 80/20 with maybe a 1/8" shim needed at the top. I dropped the project due to other things taking precedence as well as not needing door storage.

Place the hinge on top of the jig and register the barrel against the edge. This time, use a self-centering bit to drill holes in the non-countersunk holes. Your door should be the height of the opening minus twice the hinge leaf thickness. Mount the hinge to the door with the proper undercut hinge screws, and then the door to the cabinet.

I start off by placing the hinges where I want them on the box. I flipped the hinge over so I could use the hinge barrel as a reference. I put the barrel of the hinge against the side of the box, and using a marking knife, I scored a line around each side of the hinge. The particular knife that I use isn't very expensive and I really like it.

Place the two steel washers and bronze bearing onto the hinge pin as shown. Install a hinge plate #4 to the upper jamb. Shim the jamb as needed at location of pivot hinge for a solid mounting area with longer hinge plate screws mounted into header for final installation. Install Hinges to Bookcase
