

Energy Storage: ~54 kWh (3.6 kg H2) o Hybrid PEM FC / Li -Ion Battery o 4,000 lbs. for traction Value Prop Drivers o Energy efficiency: 45% FC vs. 20% diesel o Energy recovery via regenerative braking o Decreased maintenance costs o Oil changes eliminated o Brakes replacements eliminated o Starter replacements eliminated ...

Perforated liners are noise dampers that have been widely adopted in aeroengines, jet exhaust mufflers and other systems since the 1970s [24].Perforated liners are designed with millimetre-sized circular orifices/holes that convert the acoustic pressure fluctuations into non-radiating vortical fluctuations; this in turn gives rise to the noise reduction ...

Highlights Battery energy storage may improve energy efficiency and reliability of hybrid energy systems composed by diesel and solar photovoltaic power generators serving isolated communities. In projects aiming update of power plants serving electrically isolated communities with redundant diesel generation, battery energy storage can improve overall ...

Zhai et al. [89] concluded that about 13.5% and 6.7% energy from the exhaust and coolant of the conventional engine could be absorbed by compressed air when a series hybrid system was applied, while a parallel system enabled compressed air to recover 26% and 20% energy from the exhaust and coolant, respectively. In addition, cooling fan and ...

Therefore, to reduce the jet noise generated by the exhaust of the PAM, a silencer that mimics the gill slit structure of a shark and applies the noise reduction principle was developed. The study aimed to experimentally analyze the developed silencer to reduce the exhaust noise caused by the operation of a pneumatic system, such as a PAM.

A Daimler Trucks spokesman states: "Retarders can significantly reduce an operator"s cost, as their use reduces brake wear, preserves the liners and brake pads, as well as drums and brake discs. As a result, it is possible to reduce use of the service brake by between 50% and 80%, depending on the topographical conditions."

Noise Reduction, Transmission Loss and Insertion Loss. 3.1. Noise Reduction (NR) Variation between the pressure levels of sound of the source and receiver side is called noise reduction. Basically defined as the amount of reduction in the power of sound along the muffler from the inlet to the outlet. Equation (1) shows how it is calculated ...

Hydrogen (H 2) is another renewable alternative fuel.Performance and/or emission characteristics of

compression ignition engines with H 2 addition has been studied by many researchers. On the studies, H 2 were mostly used with other fuel types due to high auto-ignition temperature of H 2 [28], [29]. It has been reported by many researchers that carbon ...

In this paper, different efficient Regenerative braking (RB) techniques are discussed and along with this, various hybrid energy storage systems (HESS), the dynamics of vehicle, factors ...

For achieving the desired vehicle speed, the IC engine is very important, while for further vehicle speed maintaining and adaptation to road conditions, the braking system is important. With each brake's activation, wear products are forming, which are very harmful to the environment, because they can contain heavy metals. The braking working parameters (initial ...

Storage unit (a) outlet exhaust gases temperature, (b) PCM temperature, and (c) PCM stored energy with the charging time. The value of the PCM temperature rises over time, reaching its maximum at 3000 rpm with a value of 425.5 K after 16 min, although the lowest value is 408.9 K after 31 min at an engine speed of 2000 rpm.

Waste heat is low-grade energy, having low exergy, and thus requires an efficient device for its conversion into useful energy. Broadly, exhaust heat recovery (EHR) can be classified into two segments: (i) solid state-based EHR and (ii) fluid-based EHR (Tripathi et al. 2017). The Carnot efficiency limits all the thermodynamic processes, and despite the massive ...

The use of battery storage helps the grid to remain stable due to its ability to respond quickly to changes in energy demand. Grid-scale battery storage has the potential to significantly assist in the renewable energy transition. Noise has emerged as a key environmental impact challenge in the development of BESS. But why?

The introduction and development of efficient regenerative braking systems (RBSs) highlight the automobile industry"s attempt to develop a vehicle that recuperates the energy that dissipates during braking [9], [10]. The purpose of this technology is to recover a portion of the kinetic energy wasted during the car"s braking process [11] and reuse it for ...

Compression brakes are commonly referred to as "engine brakes", "exhaust brakes", "Jake brakes" or occasionally as "air brakes" in Australia and New Zealand. There are indications that some truck owners tamper with their vehicles in such a way as to compromise the exhaust muffler system, increasing compression brake noise.

The importance of using energy losses, because of energy sources reduction, is obvious. Exhaust has 25-30% losses from energy engine generate. However, the wasted energy cannot be fully recovered, but using heat exchanger can be a good method for heat recovery.

Brake energy recovery. Nomenclature. BER. Braking Energy Recovery. EV. Electric Vehicle. ... This method can increase the total recovered energy by 1.17 times and reduce the maximum ...

The exhaust chemical energy is expressed as a percentage of the input fuel energy. Download: Download full-size image; Fig. 3.4. The effect of dilution by air (solid line) and EGR (broken line) on the cycle efficiency and boost requirement for a fixed load.

Exhaust Brakes help extend the service life for commercial vehicle wheel brakes. How does it work? Exhaust Brakes throttle the exhaust flow to the turbine of a charged diesel engine. By doing so, they create braking force. The Exhaust Brake has a choke flap controlled by a pneumatically operated cylinder. Exhaust Brakes are designed to relieve ...

The effectiveness of torque ripple cancellation can be increased by optimizing the synthesis of different parameter domains. Additionally, it would be beneficial to examine in ...

The four-chamber silencer works on the principle of reducing noise (medium and high frequency noise reduction) of exhaust gases flow by narrowing and expanding it multiple times due to sound waves being reflected from various obstacles and perforated partitions in the upper and lower parts of the silencer.

Conventionally, the vehicle's kinetic energy is wasted in brakes as heat energy. Storage of energy obtained by regenerative braking is one of the important methods to extend the vehicle's range. The kinetic energy of the vehicle can be stored during deceleration. Thereafter, the stored energy can be used during acceleration.

Noise from battery energy storage sites. 11 Sep 2023 Yorkshire. Darren Lafon-Anthony Director of Acoustics, Enzygo Ltd. ... the potential impact on the environment and mitigation measures available to reduce noise impacts and target noise levels at receptors.

Ethanol, as one of the best alternative fuels, is widely used and tested in the spark engine due to significant reduction of exhaust emissions. For another reason, ... Engine parameters including exhaust noise, power, torque, brake specific fuel consumption, exhaust emissions (NOx, HC and CO) were measured. For each test, the measured data was ...

Engine brakes are typically used on large trucks, whereas exhaust brakes are common on medium trucks. Modern engine and exhaust brakes include silencers and are unlikely to cause significant noise disturbance. Some older heavy vehicles have unsilenced or ineffectively silenced engine brakes which produce loud noise and may cause noise disturbance.

A vehicle's kinetic energy is the most common source of energy. Nevertheless, friction-brakes cause significant portions of this energy to be lost to the surroundings in an inevitable mechanical-heat energy

conversion as represented in Fig. 4 [46]. The KERSs operate by recuperating part of the vehicle's kinetic energy mainly during braking operations, which explains why they are ...

Reviews the state-of-the-art hybrid power, energy storage systems, and propulsion for ships. ... Comfort due to noise and vibration: 9. vol/wt: 5. Cost: 10. Bunkering/Cold Ironing ... Assessing the potential of hybrid energy technology to reduce exhaust emissions from global shipping. Energy Pol, 40 (2012), ...

Thermal Energy Storage (TES) systems are pivotal in advancing net-zero energy transitions, particularly in the energy sector, which is a major contributor to climate change due to carbon emissions. In electrical vehicles (EVs), TES systems enhance battery performance and regulate cabin temperatures, thus improving energy efficiency and extending vehicle ...

The main emphasis was on the reduction of noise induced by the asynchronous or synchronous motor, gear, and inverter, and the improvement of sound quality. For example, ...

Thermal management is a critical part of today"s advanced diesel aftertreatment systems due to considerations including stringent exhaust emissions regulations, exhaust temperature-induced catalyst performance limitations, aftertreatment recovery, implications of diesel exhaust fluid dosing, and removal of solid deposits in selective catalytic reduction systems.

To achieve accurate and efficient braking deceleration control, this research focuses on energy recovery process with ultracapacitor (UC). According to the statistical ...

Due to the thermodynamic limits of the ICE's maximum efficiency, some energy is still released into the atmosphere through the exhaust [5]. The energy distribution for the engine cycle is shown in Fig. 1. Making rational storage and use of the exhaust energy is an effective method to get around the thermodynamic restrictions.

Therefore, biodiesel may be utilized as a diesel fuel alternative to meet energy demands, minimize reliance on fossil fuels, and reduce engine exhaust pollutants (Mofijur et al., 2013). The addition of clove oil in biodiesel was the reduction in particulate matter emissions (Rusli et al., 2022). Furthermore, adding clove oil to biodiesel as an ...

When designing a battery energy storage system (BESS) to meet local noise ordinance requirements, developers and engineers must address noise emissions, especially when located in proximity to noise ...
