

Can PMMA brush-modified graphene be used for flexible energy storage?

The present work using PMMA brush-modified graphene as reinforcement has reached a relatively large dielectric constant, high breakdown strength and enhanced energy storage capacity with an ultra-low filler loading, showing potential values for flexible energy storage applications. Fig. 6.

What is the grafting efficiency of PMMA brushes?

The difference in weight loss is mainly attributed to the decomposition of PMMA brushes. Therefore, the grafting efficiency of PMMA can be simply determined to be 17.6 wt% in this study. The grafting of PMMA brushes can also be verified from element changes as shown from the XPS results in Fig. 2 e and Fig. S1.

Can a superstructured single-ion conducting polymer brush inhibit lithium dendrite growth?

However, severe safety issues arising from lithium dendrite growth have gripped the throat of the practical application of lithium metal batteries. Herein, a novel superstructured single-ion conducting polymer brush (CNF-g-PSSLi) is proposed as artificial solid electrolyte interphase (SEI) film to inhibit the lithium dendrite growth.

What is high-performance electrochemical energy storage?

Research on high-performance electrochemical energy storage has been pursued worldwide to fulfill the needs of emerging high-energy-demand applications, such as portable electronics, electric vehicles, autonomous aircraft, and grid storage 1, 2, 3, 4.

Can microscale lithium metal be stored inside cellular graphene scaffold?

Deng, W., Zhou, X., Fang, Q. & Liu, Z. Microscale lithium metal stored inside cellular graphene scaffold toward advanced metallic lithium anodes. Adv. Energy Mater. 8, 1703152 (2018).

Rotor Design for High-Speed Flywheel Energy Storage Systems 5 Fig. 4. Schematic showing power flow in FES system r_i and r_o and a height of h , a further expression for the kinetic energy stored in the rotor can be determined as $E_{kin} = \frac{1}{2} \rho \pi h (r_o^4 - r_i^4) \omega^2$. (2) From the above equation it can be deduced that the kinetic energy of the rotor increases

The polymer brush (CNF-g-PSSLi) is synthesized by grafting poly(lithium p-styrenesulfonate) (PSSLi) from cellulose nanofibril (CNF) via surface-initiated atom transfer ...

According to the classical energy storage theory of linear dielectric materials as defined by $U_l = \frac{1}{2} \epsilon_0 \epsilon_r E_b^2$ [7], where E_b is the experimental breakdown strength, ϵ_0 ($8.854 \times 10^{-12} \text{ F m}^{-1}$) and ϵ_r are the vacuum and relative dielectric constants, E_b and ϵ_r are crucial parameters for effectively improving the energy ...

The Journal of Energy Storage focusses on all aspects of energy storage, in particular systems integration, electric grid integration, modelling and analysis, novel energy storage technologies, sizing and management strategies, business models for operation of storage systems and energy storage developments worldwide.

Particularly, at 150 °C, 1 wt % ZIF-67/PEI composite affords an excellent energy storage density of 4.59 J/cm³ with a discharge energy efficiency of 80.6%, exhibiting a considerable increase ...

Energy storage systems act as virtual power plants by quickly adding/subtracting power so that the line frequency stays constant. FESS is a promising technology in frequency regulation for many reasons. Such as it reacts almost instantly, it has a very high power to mass ratio, and it has a very long life cycle compared to Li-ion batteries. ...

Microbial fuel cells (MFCs) equipped with three-dimensional (3D) electrodes are widely used in wastewater treatment. However, the power output and energy storage of MFCs with 3D anodes are still limited in application. Here, a biocompatible, capacitive, and adhesive polypyrrole, carboxymethyl cellulose, carbon nanotube/carbon brush (PPy-CMC-CNTs/CB) ...

Energy storage and conversion systems using supercapacitors, batteries, and HER hinge heavily on the chemistry of materials employed for electrodes and electrocatalysts. [8, 15-21] The chemical bonds of these materials determine the capacity to store electrical energy in the form of chemical energy. The charge storage and conversion efficiency ...

Energy storage flywheel systems are mechanical devices that typically utilize an electrical machine (motor/generator unit) to convert electrical energy in mechanical energy and vice versa. Energy is stored in a fast-rotating mass known as the flywheel rotor. The rotor is subject to high centripetal forces requiring careful design, analysis, and fabrication to ensure the safe ...

The sustainable, low-cost, and efficient energy storage devices (ESDs) have already elicited extensive tremendous attention due to ever-increasing demands for renewable energy. ... It can be observed that the top of the brush is the Co nanocrystalline particles carried by ZnO nanowires, thanks to the identified lattice distances of 0.177 nm and ...
