What is the shared energy storage business model?

Fig. 1 shows the shared energy storage business model between the DCC and the SIESS. There are four kinds of energy flow in a DC, including electricity flow, heat flow, gas flow, and cooling flow. Wind turbines (WTs) are installed in DCs to provide supplementary electricity sources.

Does energy storage create value?

Energy storage can generate much more value when multiple, stacked services are provided by the same device or fleet of devices... The prevailing behind-the-meter energy-storage business model creates value for customers and the grid, but leaves significant value on the table.

Can energy storage provide multiple services?

The California Public Utilities Commission (CPUC) took a first step and published a framework of eleven rules prescribing when energy storage is allowed to provide multiple services. The framework delineates which combinations are permitted and how business models should be prioritized (American Public Power Association, 2018).
