What is a superconducting magnetic energy storage system?

Superconducting magnetic energy storage (SMES) systems store energy in a magnetic fieldcreated by the flow of direct current in a superconducting coil that has been cooled to a temperature below its superconducting critical temperature. A typical SMES system includes a superconducting coil,power conditioning system and refrigerator.

#### What is energy storage?

Energy storage involves converting energy from forms that are difficult to store to more conveniently or economically storable forms. Some technologies provide short-term energy storage, while others can endure for much longer. Bulk energy storage is currently dominated by hydroelectric dams, both conventional as well as pumped.
