A capacitor is a device that stores electrical charge. The simplest capacitor is the parallel plates capacitor, which holds two opposite charges that create a uniform electric field between the plates.. Therefore, the energy in a capacitor comes from the potential difference between the charges on its plates.

Capacitor - Energy Stored. The work done in establishing an electric field in a capacitor, and hence the amount of energy stored - can be expressed as. $W = \frac{1}{2} C U^2$ (1) where . W = energy stored - or work done in establishing the electric field (joules, J) C = capacitance (farad, F, µF) U = potential difference (voltage, V) Capacitor - Power ...
