

What is lift energy storage technology (lest)?

Lift Energy Storage Technology (LEST) is a gravitational-based storage solution. Energy is stored by lifting wet sand containers or other high-density materials, transported remotely in and out of the lift with autonomous trailer devices. The system requires empty spaces on the top and bottom of the building.

Could lift energy storage technology be a viable alternative to long-term energy storage?

Conclusion This paper concludes that Lift Energy Storage Technology could be a viable alternative to long-term energy storage in high-rise buildings. LEST could be designed to store energy for long-term time scales (a week) to generate a small but constant amount of energy for a long time.

Can lifts be used as energy storage devices?

There are several ghost towns where the lifts could be used as energy storage devices. A review of ghost cities in China can be seen in Ref. . In some cases, the investors do not rent empty apartments because they want to be flexible to sell the flat any time they get a good price. So, LEST can be a good application for such empty flats.

Could a lift energy storage system unlock skyscrapers?

Researchers from the International Institute of Applied Systems Analysis (IIASA) in Vienna, Austria, looked at the height and location of skyscrapers and saw a huge amount of pre-built energy storage waiting to be unlocked. The Lift Energy Storage System (LEST) would make use of the existing elevator systems in tall buildings.
