

What is an Energy Management System (EMS)?

By definition, an Energy Management System (EMS) is a technology platform that optimises the use and operation of energy-related assets and processes.

How does an EMS system work?

The EMS system dispatches each of the storage systems. Depending on the application, the EMS may have a component co-located with the energy storage system (Byrne 2017).

What is the EMS storage solution?

The EMS storage solution is a system designed to store more than 1000 kg H₂ at a nominal working pressure of 500 bar. It contains high-strength lightweight composite (CFRP) pressure vessels (type 4) which will be embedded in standard containers to serve at H₂ fueling stations.

What does EMS stand for?
