What is the energy storage mechanism?

The energy storage mechanism includes both the intercalation/deintercalation of lithium ionsin the electrode material and the absorption/desorption of electrolyte ions on the surface of the electrode material.

What is a thermal dynamic system?

A thermal dynamic system is a device or combination of devices (e.g., for energy storage) that contain a certain quantity of matter (e.g., thermal energy storage materials). Anything outside the system is termed surroundings. The whole universe is made of the system and the surroundings.

How can energy storage models be implemented?
