

On April 11, the 12th Energy Storage International Summit and Exhibition (ESIE 2024) kicked off at the Beijing Shougang Convention Center. Trina Solar, committed to being a global leader in smart energy solutions for light and storage, showcased its large-scale, industrial, and residential storage products, achieving full-scene coverage of storage products. The newly mass ...

Research on torque distribution strategies, emphasizing economic performance, have predominantly centered around the efficiency of motor systems, electric drive mechanisms, and principles of motor control [[15], [16], [17]]. Tan et al. [18, 19] introduced an energy conservation optimization distribution approach using particle swarm torque, aiming to position ...

Wheel motor drives, including in-wheel motor installed inside the wheel hub and near-wheel motor installed very close to the wheel hub can be controlled independently and accurately to provide drive and regenerative braking torque. Recently, wheel motor drive (WMD) electric vehicles (EVs) have been developing rapidly.

Intelligent+energy-saving dual wheel drive, Envicool signs cooperation agreement with Tongfang Smart Energy! 05-20, 2024. ... strengthen deep product cooperation, further deepen business cooperation in energy storage, data centers, communication base stations, and other fields, leverage their R& D capabilities and advantages to jointly expand ...

Facing with various driving condition, advanced dual-motor electric vehicle driven system is expected to perform better energy efficiency than single motor owing to its configurable working point. In this paper, a real-time energy management developed for a dual-motor four-wheel-drive battery electric vehicle is proposed to reduce the energy consumption while decrease battery ...

There's also better traction and stability provided by "two-wheel-drive". A dual-motor e-bike has double the power output of its single-motor counterpart. This means quicker acceleration, which is great for overtaking and usually means a higher top speed. It's also great for climbing hills and can handle steeper inclines.

In this paper, a real-time energy management developed for a dual-motor four-wheel-drive battery electric vehicle is proposed to reduce the energy consumption while decrease battery ...

DOI: 10.1016/J.NENGPRAC.2021.104779 Corpus ID: 233537301; Wheel torque distribution optimization of four-wheel independent-drive electric vehicle for energy efficient driving @article{Wang2021WheelTD, title={Wheel torque distribution optimization of four-wheel independent-drive electric vehicle for energy efficient driving}, author={Junnian Wang and ...

This paper presents an Energy Management Strategy submitted to the IEEE VTS 2021 Motor Vehicles

Challenge. The proposed solution aims to maximize the final value of the battery's ...

DOI: 10.1016/j.mechmachtheory.2022.105119 Corpus ID: 252913347; Advanced deep deterministic policy gradient based energy management strategy design for dual-motor four-wheel-drive electric vehicle

Our work demonstrates the feasibility and benefits of integrating PV, battery, and supercapacitor energy storage systems in an EV drive, paving the way for more sustainable ...

Practicability analysis of online deep reinforcement learning towards energy management strategy of 4WD-BEVs driven by dual-motor in-wheel motors. Author links open overlay panel Zhiyan Feng a b c ... The first is to optimize the drive train configuration to maximize the efficiency of the BEVs [4], [5], [6]. ... Journal of Energy Storage ...

Ansarey et al. (2014) proposed a multidimensional dynamic programming (MDP) method to achieve energy management for dual-storage fuel-cell hybrid vehicles. Guidi et al. (2009) ... 2013), each of which drives one wheel. Compared with traditional EVs, the 4WIDEV has four independent and controllable wheels (Hori, 2004). Additionally, it uses a ...

This paper proposes a novel methodology to develop a drivetrain system for a four-wheel-drive (4WD) dual-motor off-road EV. ... management of dual energy storage system for a three-wheel electric ...

This paper presents an overview of the flywheel as a promising energy storage element. Electrical machines used with flywheels are surveyed along with their control techniques. Loss minimization ...

However, efficiently splitting the power flow between power sources is crucial and difficult. In this study, an intelligent energy management strategy (EMS) is proposed for a specific dual-motor four-wheel-drive (DM-4WD) BEV to reduce energy consumption in ...

The operation of the electricity network has grown more complex due to the increased adoption of renewable energy resources, such as wind and solar power. Using energy storage technology can improve the stability and quality of the power grid. One such technology is flywheel energy storage systems (FESSs). Compared with other energy storage systems, ...

This paper presents an efficiency-based EMS for a dual-motor all-wheel drive electric vehicle developed for the IEEE VTS Motor Vehicles Challenge 2021. The proposed solution aims to ...

In order to solve the problem that, when the vehicle speed of an agricultural distributed dual-wheel electric-drive tractor changes or the system is disturbed by off-load, the traditional PI control cannot be adjusted in time, resulting in the overshoot of steering control or control delay, meaning it then cannot travel along the target trajectory quickly and accurately, ...

By mapping the vehicle status (current power, vehicle speed, etc.), power distribution, energy consumption, and traffic conditions of the dual-motor four-wheel-drive BEV during driving with the status, actions, rewards, and environment in the MDPs, it can be found that the next vehicle status and energy consumption are only related to the ...

Energy storage technology is becoming indispensable in the energy and power sector. The flywheel energy storage system (FESS) offers a fast dynamic response, high power and energy densities, high ...

A battery has normally a high energy density with low power density, while an ultracapacitor has a high power density but a low energy density. Therefore, this paper has been proposed to associate more than one storage technology generating a hybrid energy storage system (HESS), which has battery and ultracapacitor, whose objective is to improve the ...

This paper presents a novel topology of a hybrid energy storage system (HESS) and an improved energy distribution control strategy for four-wheel independent-drive electric vehicles (4WIDEVs) to improve their energy efficiency and dynamic performance under urban driving conditions. The small 4WIDEV was developed for only urban driving conditions and ...

A dual three-phase permanent magnet synchronous machine (PMSM) drive is investigated to achieve hybrid energy storage system power management and a frequency dividing coordinated control is performed for good dynamic response and seamless transient process. To improve the performance and integration of the power train of electric vehicles ...

The four-wheel distributed drive pure electric mining truck, featuring a hybrid energy storage system with battery and supercapacitor, is a promising solution for achieving zero-emission in the transportation process of open-pit mines.

In this study, the HEV is set to operate in rear-wheel-drive mode (RWD) as long as the load torque applied to the rear Permanent Magnet Synchronous Motor (PMSM) remains ...

The electric vehicle of two-wheel drives motors doesn't exploit the two front wheel; this kind of electric vehicle prompted us to propose using the front wheels in electric vehicle energy ...

The performance of the all-wheel-drive electric vehicle is inseparable from the energy management strategy (EMS). An outstanding EMS could extend the cycling mileage, coordinating the power output of the battery and exerts the advantage of the motor comprehensively. However, the current EMS has poor performance in real-time, and this ...

Based on this, the authors in Ref. [64] compared two hybrid energy storage systems for front-wheel drive vehicles, including SC/Battery and Flywheel/Battery system during regenerative braking and extreme start-up operations. ... HEV (b) single-axle drive PEV(c) Dual-axle drive PEV (d) Four-wheel drive PEV.

Request PDF | On Oct 1, 2021, Hoai-Linh T. Nguyen and others published Optimal Energy Management of a Dual-motor Electric Vehicle using Dynamic Programming | Find, read and cite all the research ...

The whole vehicle dynamics model and the TCS model is built by MATLAB/Simulink, and the simulations compare the control effect of the distributed drive and the coupling drive under r_SES algorithm and SES algorithm for TCS, respectively. To ensure that the vehicle maintains a straight line, the corrections are made by the driver model during ...

A review of energy storage types, applications and recent developments. S. Koohi-Fayegh, M.A. Rosen, in Journal of Energy Storage, 2020 2.4 Flywheel energy storage. Flywheel energy storage, also known as kinetic energy storage, is a form of mechanical energy storage that is a suitable to achieve the smooth operation of machines and to provide high power and energy ...

Energy storage technology is becoming indispensable in the energy and power sector. The flywheel energy storage system (FESS) offers a fast dynamic response, high power and energy densities, high efficiency, good reliability, long lifetime and low maintenance requirements, and is particularly suitable for applications where high power for short-time ...

Flywheel Energy Storage Systems (FESS) work by storing energy in the form of kinetic energy within a rotating mass, known as a flywheel. Here's the working principle explained in simple way, Energy Storage: The system features a flywheel made from a carbon fiber composite, which is both durable and capable of storing a lot of energy.
