What is a DVR for security cameras?. A digital video recorder (or DVR) is an electronic device used to record video footage in a digital format, usually to be stored on a disc, a USB drive, a memory card or within a local or network mass storage system. Digital video recorders are generally used alongside analog cameras, meaning the analog video signal requires digital ...

An NVR system is generally more complex and requires a top-tier router for solid network connectivity. In contrast, DVR is a simpler system where you can connect directly to a TV or another display device. Understanding the differences between NVR and DVR systems can help you make an informed decision while avoiding buyer's remorse.
