ing for new emission control equipment. This eliminates the steady base-load generation on the system. -Wind and solar sites are not located where power is used, so extra transmission capacity is needed. Energy storage, and specifi cally battery energy storage, is an economical and expeditious way utilities can overcome these obstacles.

However, in recent years some of the energy storage devices available on the market include other integral components which are required for the energy storage device to operate. The term battery system replaces the term battery to allow for the fact that the battery system could include The energy storage plus other associated components.
