

How can advanced energy storage systems be safe?

The safe operation of advanced energy storage systems requires the coordinated efforts of all those involved in the lifecycle of a system, from equipment designers, to OEM manufacturers, to system designers, installers, operators, maintenance crews, and finally those decommissioning systems, and, first responders.

What's new in energy storage safety?

Since the publication of the first Energy Storage Safety Strategic Plan in 2014, there have been introductions of new technologies, new use cases, and new codes, standards, regulations, and testing methods. Additionally, failures in deployed energy storage systems (ESS) have led to new emergency response best practices.

How should energy storage systems be maintained?

Preventative maintenance schedules should be maintained and records kept of maintenance activities. Energy storage sites and systems should be kept secure from both physical and cyber-threats, just as with any grid-connected resource.

What are the guidelines for battery management systems in energy storage applications?

Guidelines under development include IEEE P2686 "Recommended Practice for Battery Management Systems in Energy Storage Applications" (set for balloting in 2022). This recommended practice includes information on the design, installation, and configuration of battery management systems (BMSs) in stationary applications.

How do you ensure energy storage safety?

Ultimately, energy storage safety is ensured through engineering quality and application of safety practices to the entire energy storage system. Design and planning to prevent emergencies, and to improve any necessary response, is crucial.

How should energy storage equipment be protected?

Access to energy storage equipment should be firmly restricted, with sites and/or enclosures secured against very robust attempts at ingress. However, contact information for 24-hour response should be provided to ensure quick access, should first-responders need access in the event of an emergency situation.
