

What caused the explosion of a hydrogen fuel storage tank in South Korea?

Among them, the explosion of a hydrogen fuel storage tank in South Korea caused 2 deaths and 6 injuries (Yang et al., 2021). The causes of the accidents were hydrogen cloud explosions and chain explosions caused by hydrogen spontaneous combustion. These once again caused widespread public concern for hydrogen energy safety.

What happened after a hydrogen cylinder explosion?

A hydrogen-air mixture explosion occurred within seconds of the release, followed by a high-pressure gas jet fire. The fire and explosion caused pipe damage and activation of hydrogen cylinder temperature-pressure relief devices, adding additional hydrogen fuel to the incident, and eventually spreading to other materials on adjacent vehicles.

Do hydrogen refueling stations have explosions?

As a result, many scholars have turned their focus towards studying hydrogen leakages and explosions at hydrogen refueling stations. For example, Japanese scholars T. Tanaka and colleagues conducted dispersion and explosion experiments in a realistic and complete scaled model of a hydrogen refueling station.

Are risk factors involved in hydrogen station fire and explosion accidents?

Therefore, this study focuses on the interaction of risk factors in hydrogen station fire and explosion accidents. Based on DEMATEL-ISM and complex network models, a detailed risk analysis of hydrogen station safety is conducted from the perspectives of point (single factor), line (hierarchical logic), and surface (network structure).

What happens if a hydrogen storage tank ruptures?

For hydrogen storage tank rupture, a maximum blast is produced in the tank due to the intensive expansion of the leaked hydrogen, which then decays rapidly and exponentially with the distance and the time. Zalosh conducted field blast test on scaled hydrogen storage tank with a confining pressure of 35 MPa subjected to fire burning.

How many hydrogen explosions have happened in 20 days?

In 2019 alone, three hydrogen explosion incidents occurred within 20 days around the world [,,], including a refueling station explosion in Norway, a transport vehicle explosion in the United States, and a hydrogen storage tank explosion in South Korea.

Hydrogen, an advanced energy source, is growing quickly in its infrastructure and technological development. Urban areas are constructing convergence-type hydrogen refilling stations utilizing existing gas stations to ensure economic viability. However, it is essential to conduct a risk analysis as hydrogen has a broad range for

combustion and possesses ...

The International Renewable Energy Agency predicts that with current national policies, targets and energy plans, global renewable energy shares are expected to reach 36% and 3400 GWh of stationary energy storage by 2050. However, IRENA Energy Transformation Scenario forecasts that these targets should be at 61% and 9000 GWh to achieve net zero ...

Update 15.06.2019: H2 refuelling stations manufactured by Nel have been closed for the time being as a precaution after the explosion at a hydrogen filling station in Norway four days ago. According to H2 Mobility, four stations in Germany are affected by this measure. Update 01.07.2019: The hydrogen leak was caused by an improperly installed plug.

An explosion occurred at a hydrogen storage facility in Fukushima Prefecture: 4: May 23, 2019: Korea: ... The research model proposed in this paper can be applied to various complex scenarios, such as combined oil and hydrogen stations, energy service stations, and industrial parks. However, due to the limited availability of accident data for ...

The consequences of hydrogen leaks and explosions are predicted for the sake of the safety in hydrogen refueling stations. In this paper, the effect of wind speed on hydrogen leak and diffusion is ...

In China, the first renewable energy hydrogen refuelling station has been in operation for nearly 3 years. Hydrogen in this station is produced on-site by utilizing renewable energy (solar and wind energy), while the hydrogen refuelling stations established previously in China were based on methane reforming or coal coking as a source of hydrogen.

2.16 MWh lithium-ion battery energy storage system (ESS) that led to a deflagration event. The smoke detector in the ESS signaled an alarm condition at approximately 16:55 hours and discharged a total flooding clean agent suppressant (Novec 1230).

Fire brigade responds to fire at hydrogen filling station in Gersthofen - Germany. It was only opened about a week ago and now it is closed again. A fire broke out at the new hydrogen filling station in the freight transport center in Gersthofen on Tuesday morning. According to the police, a loud bang was heard in parts of Gersthofen at around 10:10 am ...

Abstract This paper aims to enhance the understanding of hydrogen explosions in hydrogen refuelling stations and evaluate associated risk factors using computational fluid dynamics simulations. ... E); however, case C19 (explosion at storage room) has severe consequences and has an excessive range of shock waves that can demolish entire ...

Hydrogen-gasoline hybrid refueling stations can minimize construction and management costs and save land

resources and are gradually becoming one of the primary modes for hydrogen refueling stations. However, catastrophic consequences may be caused as both hydrogen and gasoline are flammable and explosive. It is crucial to perform an effective ...

2.16 MWh lithium-ion battery energy storage system (ESS) that led to a deflagration event. The smoke detector in the ESS signaled an alarm condition at approximately 16:55 hours and ...

Firefighters extinguished fires of diesel fuel and tires and initiated elevated water streams to protect other hydrogen gas trailers, a liquid hydrogen tanker, and a stationary liquid hydrogen tank exposed to the fire from the burning trailer module.

In this context, the explosion of a hydrogen storage tank at a plant in Gangwon Province, South Korea, in May 2019, the flash explosion of a hydrogen refueling unit at a petrochemical company in Zhuhai, China, in January 2020, and the bursting and combustion accident of a hydrogen tanker truck due to a ruptured hose in August 2021 in Liaoning ...

This previous incident combined with the latest hydrogen refueling station explosion is a bit of a blow to the hydrogen fuel transportation industry. Already, there has been a struggle to convince car buyers to choose FCEVs due to there being an insufficient number of ...

The recent Hydrogen Refueling Station (HRS) explosion in Norway confirms the need for improved design of these facilities to further facilitate the commercialization of a Hydrogen economy.

Explosion at hydrogen filling station outside Oslo (Norway) o No fatalities and no on-site injuries o Stations within the same product family on a temporary standby until the root cause ...

While hydrogen is regularly discussed as a possible option for storing regenerative energies, its low minimum ignition energy and broad range of explosive concentrations pose safety challenges regarding hydrogen storage, and there are also challenges related to hydrogen production and transport and at the point of use. A risk assessment of the ...

Download Citation | On Nov 1, 2024, Zhen Yang and others published Safety analysis of hydrogen explosion accident in underground hydrogen storage gas injection station | Find, read and cite all ...

Hydrogen refueling station (HRS) is an essential part of the infrastructure for promoting the hydrogen economy. Since hydrogen is a flammable and explosive gas, hydrogen released from high-pressure hydrogen storage equipment in HRS will likely cause combustion or explosion accidents.

Kim carried out the studies of hydrogen leak and explosion of hydrogen fueling station in Korea ... a geometric model was established according to the real size energy storage station, and the ...

The disturbance of external wind and the decrease in hydrogen storage pressure will have a positive impact on the reduction of leaked volume. ... and explosion accidents in the hydrogen station ...

Taekeno et al. [53] outlined the experimental analysis of the dispersion and explosion of high-pressured hydrogen gas that escapes via a large-scale ... islanding DC microgrid with an electric-hydrogen hybrid energy storage system was proposed by the authors for an electric-hydrogen hybrid refueling station. ... infrastructure, known as the ...

One particular Korean energy storage battery incident in which a prompt thermal runaway occurred was investigated and described by Kim et al., (2019). The battery portion of the 1.0 MWh Energy Storage System (ESS) consisted of 15 racks, each containing nine modules, which in turn contained 22 lithium ion 94 Ah, 3.7 V cells.

The construction of hydrogen refueling stations (HRSs) is crucial in supporting the comprehensive popularization of hydrogen energy. However, many countries have difficulties expanding hydrogen infrastructure due to the high risk of hydrogen. In this work, a Computational Fluid Dynamics three-dimensional model is combined with individual lethality probability ...

In addition, multi-energy filling stations have also been actively built, where hydrogen refilling stations are installed on existing internal refueling stations for combustion engine vehicles [2]. Hydrogen gas has a wide flammable range (4-75%), and it can explode due to static electricity.

Poland has released a strategic document outlining its main objectives for the development of hydrogen, by creating incentives in the energy, transport, and industry sectors. In the power and ...

o Equilibrium thermodynamics properties for hydrogen explosion well established
o Chemical kinetics of hydrogen oxidation sufficiently understood quantitatively (explosion limits, laminar flame propagation)
o Explosion parameters are also well established (flammability limit, ignition energy, quenching distance, etc.)

Many of the studies on hydrogen stations have dealt with explosion, deflagration, or detonation of hydrogen (Yamanaka et al., ... in International Journal of Hydrogen Energy, 2023. Types of hydrogen explosion. ... When hydrogen leaks violently from the high-pressure gaseous or liquid hydrogen storage tanks, deflagration will be produced with ...

The hydrogen refueling station explosion occurred in the early morning hours on Monday (June 10, 2019), in Sandvika, Norway. ... Oil & Gas Coal Thermal Power Solar Wind Power Hydropower Nuclear Power Power Grid Hydrogen Geothermal. Energy Storage Energy Efficiency New Energy Vehicles Energy Economy Climate Change Biomass Energy. Video ...

hydrogen energy storage system is developed and many demonstration projects have been employed to prove the feasibility of the idea [4]. One of the successful projects is MYRTE project which was commissioned at Corsica, France. According to [5], in MYRET project, hydrogen energy storage system is integrated into the local PV station to generate ...

Despite its advantages, the flammability of hydrogen has raised public concern about hydrogen-related hazards considering catastrophic incidents, such as the hydrogen explosion at the Fukushima nuclear power plant in 2011 and the Hindenburg fire in 1937 (Itaoka et al., 2017). During the past decades, several accidents associated with handling liquid ...

Hydrogen, a promising alternative energy source, is increasingly seen as a vital component in achieving a sustainable and low-carbon future. As its applications span across various sectors, including energy storage, fuel, and industrial processes, ensuring hydrogen safety has become paramount. This article explores different approaches to hydrogen safety, ...

As the foundation for the growth of the hydrogen energy industry and hydrogen energy automobile, hydrogen fueling stations have emerged as the top priority for industrial development in the context of green transformation. ... The risk of a hydrogen explosion at the storage tanks of the hydrogen fueling station is assessed by establishing an ...

gen energy. They may fear the hydrogen station and consider that an explosion accident could occur, that which occurred at a compressed storage facility containing hydrogen gas transferred from the water electrolysis facility in Gangwon province in Korea [7]. As a

Since the density of hydrogen is low, to improve the volumetric energy density of hydrogen tanks, the design pressure of gas storage tanks usually reaches 35 MPa or even 70 ...

Safety investigation of hydrogen energy storage systems using quantitative risk assessment ... discussed a QRA of a hydrogen generation unit. Gye et al. [42] conducted a QRA of a hydrogen refuelling station in an urban environment. Pan ... The extent of damage caused by a hydrogen explosion can be determined based on the magnitude of the ...
