

What is cold thermal energy storage (CTEs)?

Cold thermal energy storage (CTES) technology has received increased interest for the past two decades from researchers and stakeholders in the refrigeration sector as measure to reduce the peaks in the cooling load that occurs in many refrigeration systems, e.g. in food processing plants and air-conditioning systems.

What is the purpose of a refrigeration storage system?

The main purpose of the storage is to provide the peak cooling demandduring the cooling down of new products when they are placed in the cooler (pull-down load) so that the refrigeration system can be sized for the average refrigeration load rather than the peak load.
