

What type of inverter/charger does the energy storage system use?

The Energy Storage System uses a MultiPlus or Quattro bidirectional inverter/charger as its main component. Note that ESS can only be installed on VE.Bus model Multis and Quattros which feature the 2nd generation microprocessor (26 or 27).

What products are available for efficient solar inverters?

This portfolio includes a wide range of products for efficient solar inverters in all power ranges: residential, industrial and utility scale. The products are scalable, from individual modules, including dedicated drivers, to high power SKiiP 4 IPMs and ready-to-use power electronic stacks.

Can ESS work with a grid-tie PV inverter?

PV (optional) ESS can work with both Grid-tie PV inverters and/or MPPT Solar Chargers. (A mix of both is also possible.) When using Grid-tie PV Inverters we recommend monitoring is performed using the CCGX. See CCGX manual for the options. ESS can also be operated without PV.

Do solar and energy storage converters use the same hardware?

In order to achieve economy of scale, manufacturers typically use the same hardware for solar and energy storage converters. While the three-level NPC topology works well for solar, this can often mean de-rating for energy storage while in charging mode.
