This level allows a penetration of no more than 7mm for the knife, and 0mm for the spike, with an allowance for 1 penetration of no limit. Energy Level 1: 33 joules, at 5.9 m/s. This level allows a penetration of no more than 7mm for the knife, and 0mm for the spike, with an allowance for 1 penetration of no limit.

Are lithium-ion batteries a good choice for energy storage?

Lithium-ion batteries are being widely deployed in vehicles, consumer electronics, and more recently, in electricity storage systems. These batteries have, and will likely continue to have, relatively high costs per kWh of electricity stored, making them unsuitable for long-duration storage that may be needed to support reliable decarbonized grids.

What if we don't have the right energy storage mix?

Dr Holger Wolfschmidt from Siemens Energy explains why without the right quantity and energy storage mix in place, we won't be able to stabilise the grid, decarbonise power generation, secure energy supply and make sector coupling possible.

Are complementary energy storage systems necessary?

As the world aims to ensure a secure and decarbonised energy supply, it's clear that a mix of complementary energy storage systems will be indispensable. Dr Holger Wolfschmidt is Senior Portfolio Manager Storage at Siemens Energy.

Why do we need a co-optimized energy storage system?

The need to co-optimize storage with other elements of the electricity system, coupled with uncertain climate change impacts on demand and supply, necessitate advances in analytical tools to reliably and efficiently plan, operate, and regulate power systems of the future.
