Should energy storage be a key issue in mining?

The second place that energy storage emerged as a key issue was less expected: in their vision of "smart" and "sustainable" mines, mining companies see advanced energy storage as a key component of the so-called "future of mining" and their vision of the "mine of the future".

What materials do we need for energy storage?

Wind energy demands steel, copper, aluminium, zinc and lead as well as neodymium for turbine magnets. Hydro power demands concrete and steel for basic infrastructure in addition to copper and aluminium for power transmission 1. Energy storage will be needed for wind and solar electricity generation as well as BEVs.

Can energy storage be a source of untapped financial value for mining companies?

In the first two modalities of decarbonisation, energy storage becomes a source of untapped financial value for mining companies. As demand for renewable energy generation and storage grows, the demand for products that only mining companies can produce also grows, from lithium and cobalt and manganese to copper and aluminium.

What are the benefits of smart technology in mining?

Advanced technologies, including smart sensors and automated equipment, enable real-time monitoring and optimization of mining processes. These innovations lead to better resource management, reduced energy use, and enhanced safety for workers.

Should mining companies invest in energy storage?

If the goal of for-profit companies is to extract as much profit as possible, then energy storage emerges as a convenient reserve of both economic and moral value that mining companies (and perhaps mining companies alone) are well-positioned to exploit.

Why is energy storage a challenge in the mining industry?

The challenge, however, is that the mining industry requires an immense amount of energy storage capacity and for much longer time periods than much of the current battery technology can provide. "We are hoping that as the technology grows, [the storage capacity and duration] will increase."
