To technically resolve the problems of fluctuation and uncertainty, there are mainly two types of method: one is to smooth electricity transmission by controlling methods (without energy storage units), and the other is to smooth electricity with the assistance of energy storage systems (ESSs) [8].Taking wind power as an example, mitigating the fluctuations of ...

The integrated DMS/OMS system model is initially created using a one-time data load from the GIS. Periodic updates to the DMS/OMS model is then performed using an incremental update process from the GIS. Since the DMS and OMS use the same network model, it is only necessary to have a single update process.
