What is a battery energy storage system (BESS)?

The other primary element of a BESS is an energy management system (EMS) to coordinate the control and operation of all components in the system. For a battery energy storage system to be intelligently designed, both power in megawatt (MW) or kilowatt (kW) and energy in megawatt-hour (MWh) or kilowatt-hour (kWh) ratings need to be specified.

How to control battery energy management?

For example,one of the widely used strategies is SOC feedback control that dispatches the BESS to track the predetermined power production and ensure the SOC of the BESS is within the operating limits [146,148]. Another widely used optimal control method for battery energy management is model predictive control (MPC).
