What is a battery energy storage system?

A battery energy storage system (BESS) is an electrochemical device that charges (or collects energy) from the grid or a power plant and then discharges that energy at a later time to provide electricity or other grid services when needed.

Why are battery energy storage systems becoming a primary energy storage system?

As a result, battery energy storage systems (BESSs) are becoming a primary energy storage system. The high-performance demandon these BESS can have severe negative effects on their internal operations such as heating and catching on fire when operating in overcharge or undercharge states.
