What is Compressed Air Energy Storage (CAES)? Compressed Air Energy Storage is a technology that stores energy by using electricity to compress air and store it in large underground caverns or tanks. When energy is needed, the compressed air is released, expanded, and heated to drive a turbine, which generates electricity.

Among Carnot batteries technologies such as compressed air energy storage (CAES) [5], Rankine or Brayton heat engines [6] and pumped thermal energy storage (PTES) [7], the liquid air energy storage (LAES) technology is nowadays gaining significant momentum in literature [8]. An important benefit of LAES technology is that it uses mostly mature, easy-to ...

Both, however, are intermittent and, therefore, require some form of energy storage to supply energy when the resources are less abundant. Lithium-ion battery systems have become the most glamorous method to store energy on a grid scale, but they are not the only way that huge amounts of excess energy can be stored and then returned to the grid ...
