For increased penetration of energy production from renewable energy sources at a utility scale, battery storage systems (BSSs) are a must. Their levelized cost of electricity (LCOE) has drastically decreased over the last decade. Residential battery storage, mostly combined with photovoltaic (PV) panels, also follow this falling prices trend. The combined ...

connected electrochemical energy storage (EES) is envisioned to potentially provide high-value energy services (Dunn, Kamath, & Tarascon, 2011). At the same time, any commercial investment into a potential energy storage project must be economically feasible, which means covering investments costs and offering a reasonable rate of return.
