Energy. Energy can be defined as the capacity to supply heat or do work. One type of work (w) is the process of causing matter to move against an opposing force. For example, we do work when we inflate a bicycle

tire--we move matter (the air in the pump) against the opposing force of the air surrounding the tire.

Biological reactions are driven by an energy flux, with sunlight serving as the energy source. Photosynthesis is the process by which radiant solar energy is converted into chemical energy in the form of ATP and NADPH, which are then used in a series of enzymatic reactions to convert CO<sub>2</sub> into organic compounds. The photosynthetic algae ...
