

How much energy does a high school basketball player need?

**DAILY ENERGY NEEDS** The energy requirements of high-school basketball players can be considerable. In a recent study by Silva et al,<sup>4</sup> energy expenditure in elite high-school-aged female and male basketball players during the season was measured to be over 3,500 and 4,600 kcals/day, respectively.

What are the three energy systems in basketball?

Three energy systems -- commonly referred to as metabolic pathways -- are responsible for the chemical reactions within cells and tissues during exercise and sports. These energy systems include the phosphagen, glycolytic and oxidative pathways. For a basketball player, all three of these energy systems are essential during competition.

Does basketball require a lot of energy?

D. M., & Milanovi?, Z. (2018). The Activity Demands and Physiological Responses Encountered During Basketball 1ph, Ontario, Canada **KEY POINTS** In stop-and-go sports like basketball, large amounts of energy are needed from the aerobic and anaero

Where does basketball energy come from?

During a basketball game, about 85 percent of the athlete's energy comes from the phosphagen system, followed by about 15 percent from the glycolytic system and a small percentage from the oxidative system. The phosphagen system dominates high-powered plays.

Is basketball a high-intensity sport?

Basketball is an intermittent, high-intensity sport requiring both physical agility and mental acuity. Energy demands during the basketball season are substantial and may be even higher during off-season training. Choosing foods that will provide the energy to support competition and training is essential and can also be quite challenging.

Which fuel is best for basketball?

glycolysis (lactate and H<sup>+</sup>). Carbohydrate is the fuel of choice for basketball as it is the dominant fuel for energy production during high-intensity aerobic exercise and is also the only fuel for anaerobic energy produ
