

What are the disadvantages of spot-welding machines?

Another disadvantage is the limited sheet thickness which can be welded. Modern high-energy spot-welding machines are constructed nowadays as three-phase machines with their typical low power requirements and high power factors. Using these machines, it is possible to weld sheets up to 6 mm in thickness (Figure 4500.01.10).

Why do I need a larger weld spot diameter?

Larger weld spot diameters are necessary to attain the required shear strength with softer materials. The mechanical pretreatment can be carried out with simple equipment and does not require any special rooms. The softer alloys (pure aluminium, AlMn) tend to "smear" easily so that proper care must be taken while working with them.

How much energy is needed for welding aluminium?

For this reason, it is essential that the welding energy for aluminium be delivered within as short a time as possible. Thus, the current required for welding aluminium is about twice that for welding steel sheets of the same thickness, and this although the aluminium alloys have a much lower melting point.

How to avoid a metal pick-up tendency in a spot welding?

An intensive cooling of the electrodes is of paramount importance to avoid any electrode metal pick-up tendency. Due to the low resistance of the material aluminium, the spot welding must be carried out with high welding currents within short welding times using a special electrode force programme (Figure 4500.01.03).

Why is aluminium suitable for spot welding?

The high affinity of aluminium for oxygen, which causes metallic blank aluminium to be covered at once with a thin, dense and tightly adhering oxide film, has a major effect on the suitability of aluminium for spot welding. The oxide film has a high thermal stability and a melting temperature of over 2,000°C and is a non-conductor of electricity.

The Stored Energy welding power supply - commonly called a Capacative Discharge Welder or CD Welder - extracts energy from the power line over a period of time and stores it in welding capacitors. Thus, the effective weld energy is independent of line voltage fluctuations. This stored energy is rapidly discharged through a pulse transformer producing a flow of electrical current ...

The newly designed U.S. Solid USS-BSW00008 high-frequency inversion battery spot welder equips with the six super capacitors for energy storage and power supply for pulse welding. Unlike traditional AC transformer spot welders, it does not cause any interference to the electric circuit, eliminating tripping problems.

Short Description: ADR-30000 Capacitor Discharge Energy Storage Spot Projection Welding Machine The principle of the ADR-30000 capacitor discharge spot welder is to charge and store a group of high-capacity capacitors through a small transformer in advance, and then discharge and weld the welding parts through a

high-power welding resistance transformer.

Model No:-Semco SI HWM 801D=Energy storage inverter spot welding machine 12.6KW Overview-The new-designed battery spot welder is equipped with two super capacitors for energy storage and a stable power source for pulse spot welding pared to the traditional AC spot welder, it has no interference to the electric circuit and no more tripping problems.

Shop VEVOR Battery Spot Welder, 14.5KW Capacitor Energy Storage Pulse Battery Spot Welder with 73B Welding Pen, 801D High Power Spot Welding Equipment & 2 Welding Modes for 0.1-0.3mm Pure Nickel, Batteries at lowest price, 2-day delivery, 30-day returns.
