What is a battery energy storage system?

A battery energy storage system (BESS) is an electrochemical device that charges (or collects energy) from the grid or a power plant and then discharges that energy at a later time to provide electricity or other grid services when needed.

Are energy storage system integrators grid-connected?

The leading energy storage system integrators have built microgrids, but they're not generally grid-connected, Ellis says. That's because microgrid developers face challenges connecting their projects to the grid. "With microgrids, one big issue is the existing rules that allow utilities to be the sole provider of electric service in an area.
